## ABOUT

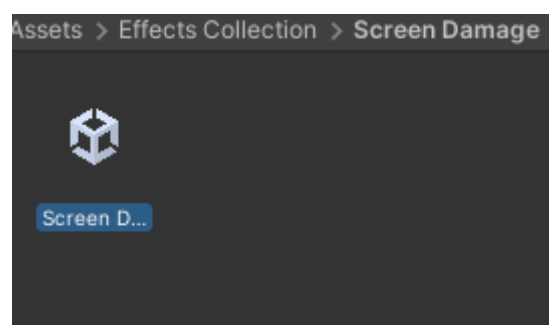

This is a collection of 6 effect tools all combined in one package with a lower price of a bundle. It includes: Screen Damage, Skybox Blender, Destructive Tornado, Light Flickering, Invert Effect and 3D Camera Rain Drops.

## GETTING STARTED

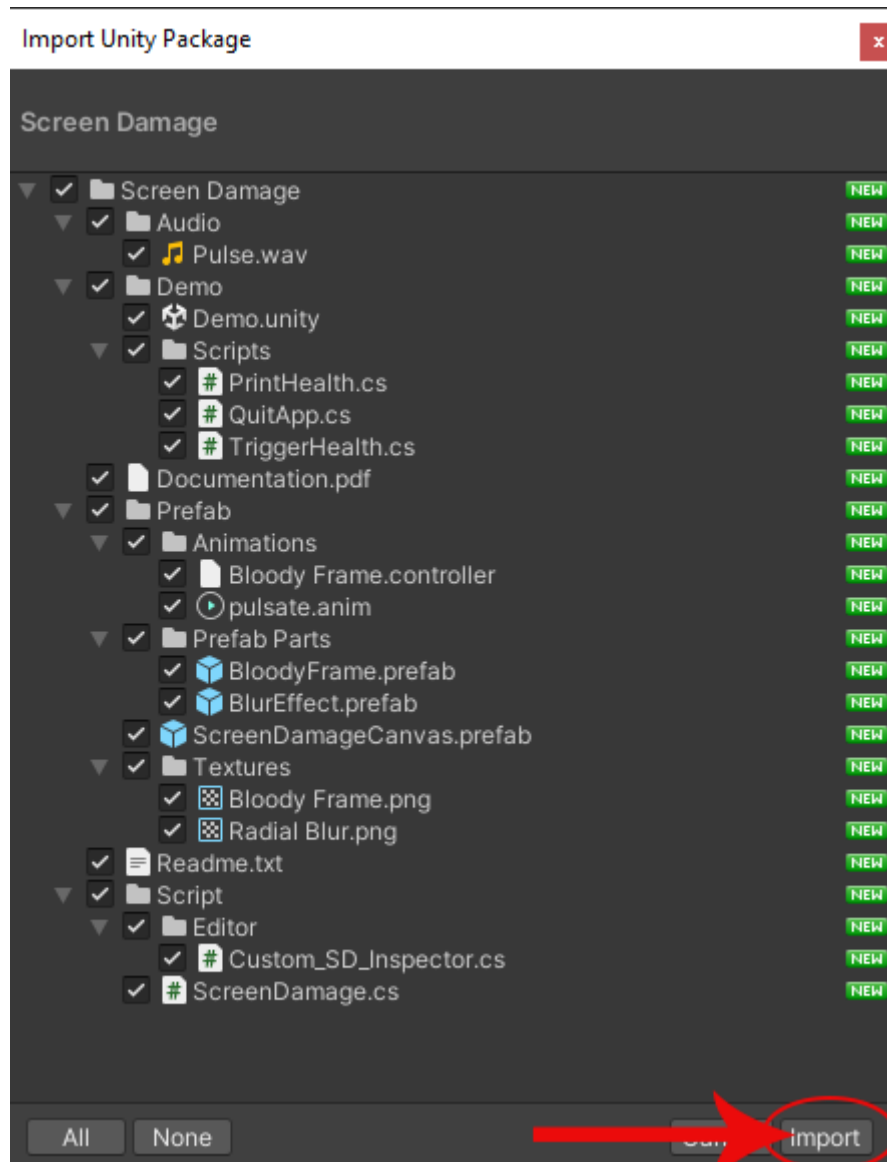

Since this is a collection, each asset has it's own folder and a *.unitypackage*.

Go inside the folder you want and double click the *.unitypackage* file.

A dialogue box will appear asking you to import the package's files...Click **Import**

After importing, you'll find that each package has it's own set of demos, documentation and source codes.

You can now try the demo of the asset, read it's documentation for more information and do the same for all other assets. You're good to go from here.
